

Come Join Us!

at

Air Scharnell

for our

Monthly Seminars

beginning Saturday, November 1st

3:00-4:00pm

Each month our seminars will be all about RC Aircraft and their components, how to build them, how to maintain them, how to repair them, what products to use for each application (radio equipment, engines, motors, speed controllers, glues, covering, etc etc). Have you ever wished your ARF was stronger? We know how to make them more durable. Have you ever wondered what coverings to use? We know all about covering. How about how to set your radio up for your airplane application? We can show you how. We have a load of information we would like to share with you. We will have demonstrations on how tos, whats works well in our altitude and what doesn't, What's new and hot and whats not. You name it, if it has anything to do with Airplane and helicopters, we are going to talk about and have information on it each month. We will occasionally have guest speakers too!

Seminars will start November 1st and then be the 4th Saturday of each month (some months may change due to holidays or events, we will give plenty of notice if we change the Saturday) right here at the store. All we ask you is to sign up so we know how many chairs we need to have set up for you all and too, bring your questions and comments along with any suggestions as to what you would like to see at one of our seminars. The subject of the first seminar will be sent to you in a separate email.

You can sign up by coming into the store and signing the list, call and give your name, or simply email us at AirScharnell1@cs.com
